The Journal of Genetic Psychology is devoted to research and theory in developmental psychology across the life span. Articles that concern educational, clinical, cross-cultural, and comparative issues related to development are also encouraged. Although the major focus of the journal is empirical research and the exposition and criticism of theory, book reviews are published regularly. The journal occasionally publishes applied and descriptive articles, brief reports, and replications and refinements.

Quarterly; ISSN 0022-1325
